

Exam Questions 2021

Lo-fi Prototyping

Why is it important to start with lo-fi prototyping in a design process?

Wireframes

What is a wireframe? What do you use it for in the design process?

Gestalt Laws

What are gestalt laws? Pick two, describe them in more detail, and give examples of how we can use them in user interface (UI) design.

Memory limitations

There are many UI design implications of long- and short-term memory limitations, such as displaying reminders, highlighting search terms in results list, avoiding modes, autofilling forms, and providing instructions. Pick two and describe how these implications address memory limitations and influence user experience.

Clean-up action

What is a clean-up step or clean-up action? Give one example of a clean-up step in the interaction with a web, mobile, or desktop application that can be overlooked and explain how this situation can be handled in design.

Responsiveness (UX)

What is responsiveness from a user experience perspective? (Do not confuse it with HTML responsiveness). Provide two examples of features or elements that ensure responsiveness in UI and explain how they might influence user experience.

Accessibility

How can we make a webpage with images and other visual elements more accessible?
